

Weeks	Possible Test
6 - 8	Blood type, rubella titer, blood counts, hepatitis screen, ultrasound.
10 -12	Doppler detection of fetal heart, CVS, if planned.
11 - 14	First trimester screen/Nuchal translucency (11-12 weeks is best) cell-free fetal DNA is appropriate.
15 -18	Second trimester serum screen (sometimes called quad screen), amniocentesis (if planned).
18 - 22	Ultrasound to evaluate fetal anatomy.
24 - 28	Glucose screen to check for gestational diabetes.
28 - 36	Every-other-week visits to check blood pressure, weight, urine protein, and fetal growth.
36 - 40	Weekly visits to check all the above and to assess fetal position. Some gynae do internal exams to check the cervix, some do a vaginal/rectal culture for group B streptococcus.
40 - ??	Twice - weekly visits to assure fetal well-being.
